Education

•Indian Institute of Technology Ropar *Nov 2021 – June 2025*
B.Tech, Electrical Engineering — Top engineering institution with nationwide rank 5200 entry (JEE Advanced) Ropar, India

Experience

•CrossBo AI *Jun 2025 – Present*
Software Developer (Full Stack) UAE (Remote)

- Shipped full-stack features across **Genie** (guest app) and **Luna** (staff app), deployed in **3 international hotel chains** — Casa Cook, Cook's Club, and Chedi Egypt — directly improving guest and staff experience at scale.
- Diagnosed and resolved critical **production incidents** across both mobile applications, cutting user-facing error rates and increasing app stability for live hotel operations.
- Architected and delivered **scalable REST APIs** in JavaScript that unified data flow between frontend and backend, eliminating bottlenecks in real-time guest service workflows.
- Slashed image and static asset load time by **∼30%** by engineering **CDN caching** and optimized resource routing into the CI/CD pipeline — directly improving perceived app speed for end users.

•NOVUS HI-TECH *June 2024 – Dec 2024*
Software Development Intern (Full Stack) Gurugram

- Engineered a **cross-platform mobile app** (Android + iOS) using **React Native**, **Node.js**, and **MongoDB** with **JWT authentication** — delivered production-ready in 7 months from zero to deployment.
- Boosted app performance by **30%** by applying React rendering optimizations; shipped interactive features including **live video streaming**, real-time location tracking, and WebView integration — reducing UX drop-off.
- Sole developer on **J1939 CAN protocol** parsing module for automotive systems; applied **Singleton**, **Prototype**, and **Factory** design patterns to produce a modular, production-grade service architecture.

Projects

•ConnectHub — Real-Time Video Conferencing App *May 2024 – June 2024*
Flutter · Dart · Firebase · Google Auth **GitHub**

- Built a fully functional **Zoom-like mobile app** supporting audio/video calls, screen sharing, and meeting history — end-to-end in under 6 weeks using Flutter and Firebase Firestore.
- Implemented **Google OAuth** for secure session management, making the app production-ready and safe for real user data.

•Flight Reservation System — Real-Time Routing Engine *Oct 2023*
C++ · Dijkstra's · DFS · Linked Lists **GitHub**

- Designed a real-time reservation engine using **Dijkstra's** and **DFS** algorithms, enabling optimal route computation across flight networks — demonstrating strong DSA fundamentals.
- Delivered complete CRUD functionality (search, book, display, delete) with **linked-list** based ticket storage for O(1) access patterns.

•BookNest — Cross-Platform Book Discovery App *Aug 2024 – Sep 2024*
React Native · Node.js · MongoDB · Axios · JWT **GitHub**

- Shipped a full-stack book discovery app with **author search**, user reviews, and three-state collection tracking (Wishlist / Reading / Completed) — end-to-end in under 6 weeks.
- Integrated **external book APIs** via Axios for live data and secured all sessions with **JWT authentication**, delivering a production-grade auth flow.

Technical Skills

- **Languages**: C/C++, JavaScript, SQL, Dart
- **Frontend**: React.js, React Native, Flutter
- **Backend & DB**: Node.js, REST APIs, MongoDB, Prisma, Directus, JWT Auth
- **DevOps & Tools**: CI/CD Pipelines, CDN, Git, Postman, Android Studio, Xcode, Serverless, Firebase
- **Concepts**: System Design, OOP, Design Patterns, Data Structures & Algorithms, Computer Networks, OS

Achievements

•JEE Advanced, Ranked **5,200 out of 1,000,000**+ candidates nationwide — top 0.5% in India's most competitive engineeri

•CodeKaze '23, Secured **College Rank 12** in India's largest tech hiring challenge *2023*

•LeetCode / CodeChef, Solved **800**+ **problems** across platforms — consistent track record of algorithmic problem solving2

•GirlScript Summer of Code, Selected as open-source contributor (GSSOC '23) — contributed to app development projec
